

## 2001 Paper 9 Question 11

### Numerical Analysis II

(a) Taylor's theorem states that if  $x \in [a, b]$  and  $f \in C^{N+1}[a, b]$

$$f(x) = T_N(a) + \frac{1}{N!} \int_a^x f^{(N+1)}(t)(x-t)^N dt$$

where

$$T_N(a) = f(a) + (x-a)f'(a) + \frac{(x-a)^2}{2!}f''(a) + \dots + \frac{(x-a)^N}{N!}f^{(N)}(a).$$

Prove Taylor's theorem.

[6 marks]

(b) Peano's theorem states that if a quadrature rule integrates polynomials of degree  $N$  exactly over an interval  $[a, b]$  then the error in integrating  $f \in C^{N+1}[a, b]$  can be expressed as

$$E(f) = \int_a^b f^{(N+1)}(t)K(t) dt$$

where

$$K(t) = \frac{1}{N!} E_x[(x-t)_+^N].$$

Explain the notation  $E(f)$ ,  $E_x$  and  $(x-t)_+^N$ .

[4 marks]

(c) Use Taylor's theorem to prove Peano's theorem.

[8 marks]

(d) Under what additional condition may the simplified formula

$$E(f) = \frac{f^{(N+1)}(\xi)}{(N+1)!} E(x^{N+1})$$

be applied?
