

2004 Paper 6 Question 12

Complexity Theory

- (a) Define a one-way function. [4 marks]
- (b) Explain why the existence of one-way functions would imply that $P \neq NP$. [7 marks]
- (c) Recall that **Reach** is the problem of deciding, given a graph G a source vertex s and a target vertex t , whether G contains a path from s to t ; and **Sat** is the problem of deciding whether a given Boolean formula is satisfiable.

For each of the following statements, state whether it is true or false and justify your answer.

- (i) If **Reach** is NP-complete then $P=NP$. [3 marks]
- (ii) If **Reach** is NP-complete then $NP \neq PSPACE$. [3 marks]
- (iii) If **Sat** is PSPACE-complete then $NP=PSPACE$. [3 marks]
